

Introduction to using RStudio

Nathan Green, David Jorgensen

R can be run without Rstudio...but we don't recommend it!

Scripts

- Editor Panel
 - Text file with R commands
- .R extension

Console

- Command prompt
- Type commands here execute straight away
- Starts with > sign (known at the prompt)
- When you hit enter the output will be displayed below
- As you enter commands you accumulate a history of past commands

+ prompt

If your prompt turns into a "+", R thinks you haven't finished your previous command.

Either finish the command, or press escape.

Type 'demo()' for some demos, 'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

Webinars and Videos On Demand

Webinars and videos are presented on a variety of subjects. We will cover packages, products (both Open Source & Commercial), have guest presenters, as well as general Q&A "Office Hour" recordings. All materials will be made available and at no cost. Be sure to check out our webinar and video archives. Our GitHub Webinar Repository for all webinars can be found at: <https://github.com/rstudio/webinars>

RStudio Essentials

The RStudio IDE is bursting with capabilities and features. Do you know how to use them all? This video series, "RStudio Essentials," is the perfect way to learn how to use the IDE to its fullest. The series is broken into six segments:

Programming

- Part 1 (Working code in RStudio)
- Part 2 (Debugging code in RStudio)
- **Part 3 (Package writing in RStudio)**

Managing Change

- Part 1 (Projects in RStudio)
- Part 2 (Git and RStudio)
- Part 3 (Package version with Packrat)

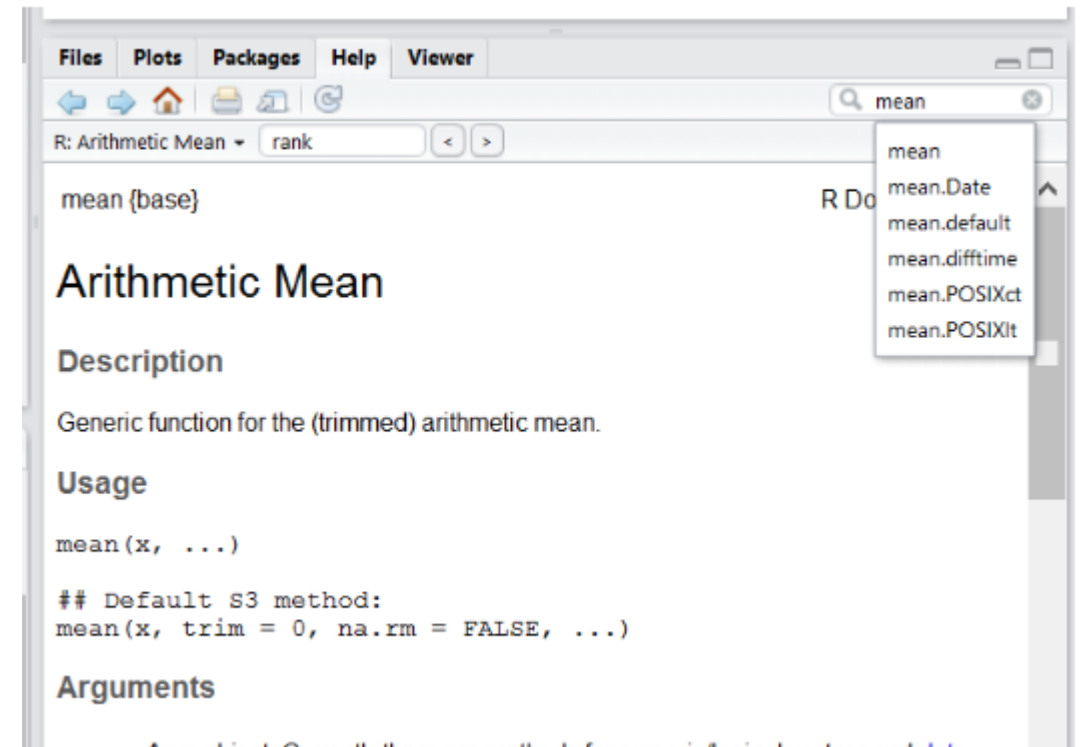

**RSTUDIO ESSENTIALS
PROGRAMMING & PACKAGE
WRITING IN RSTUDIO**

Each webinar will be 20 minutes long, which will make them easy to attend. If you miss a live webinar or want to review them, all recorded versions will be available on YouTube.

Getting help at the console

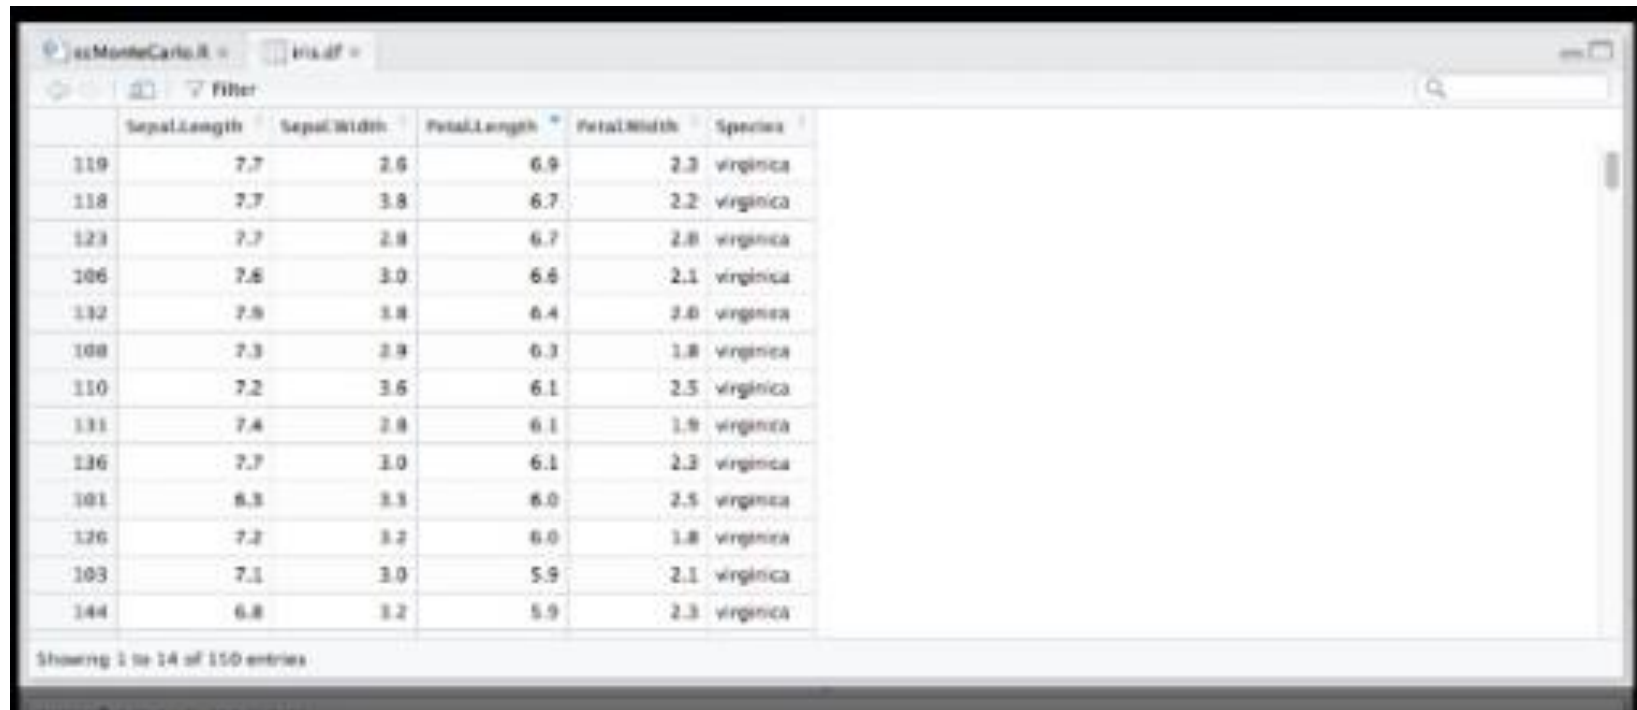

- Several different ways to access help files

- `help(<name>)`
- `?<name>`
- F1
- Help tab search

Viewer

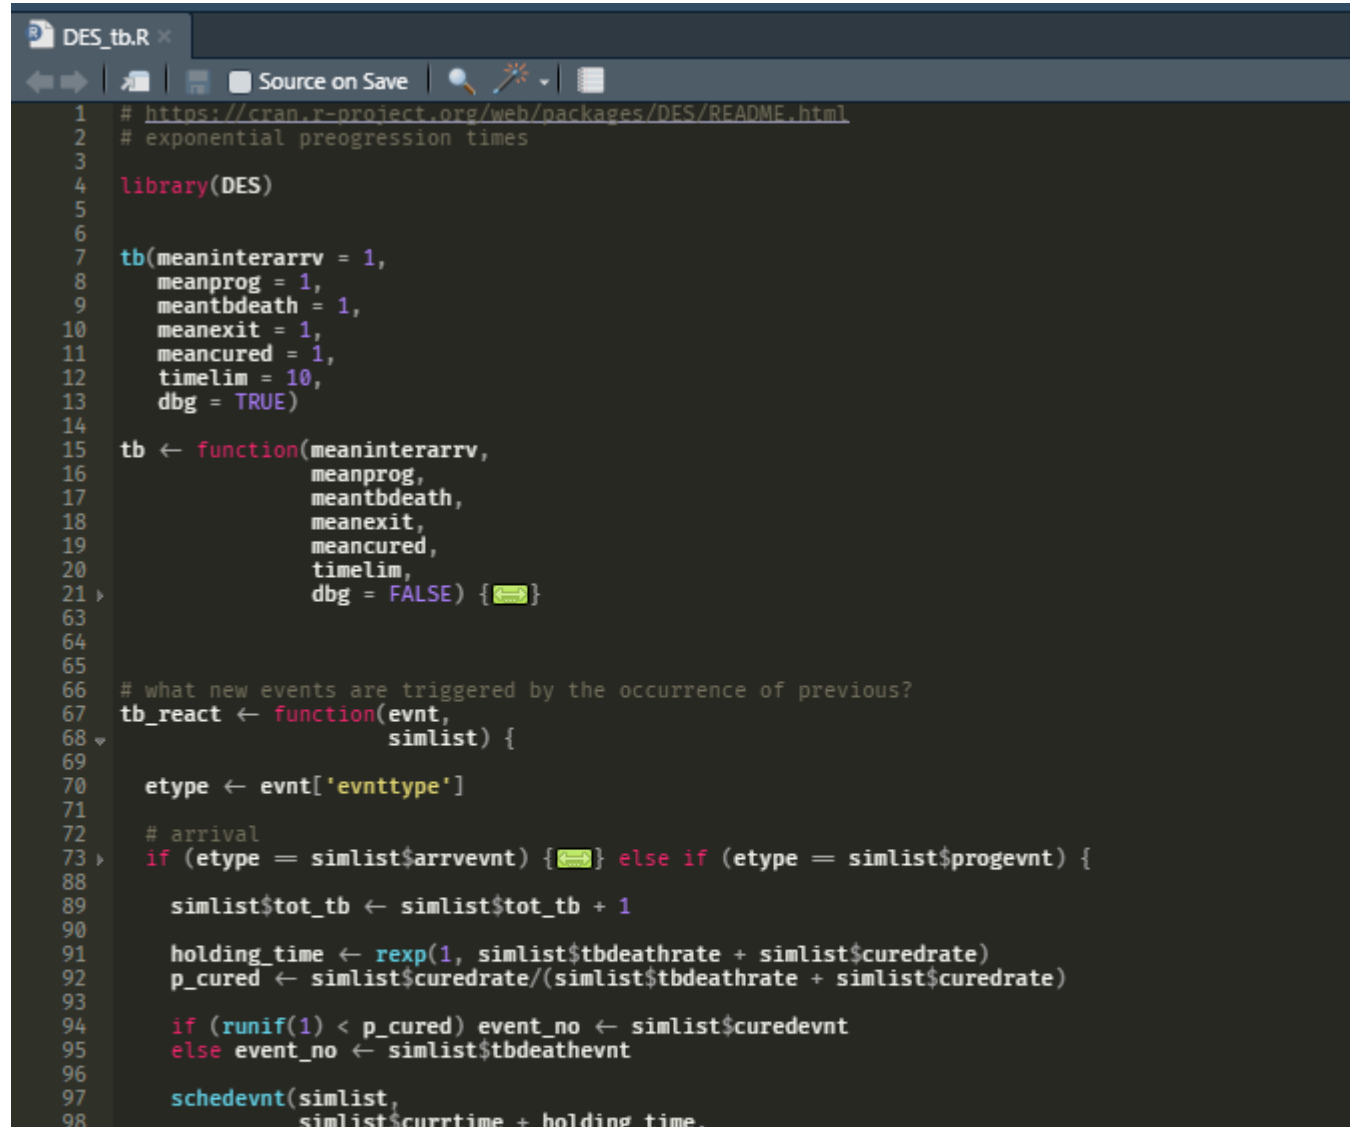

- Real time view of data
- Filter, sort and search

Workflow

- Its easier to compose your code in an R script than in the command line
- To open a script, go to File>New File>R Script in the tool bar

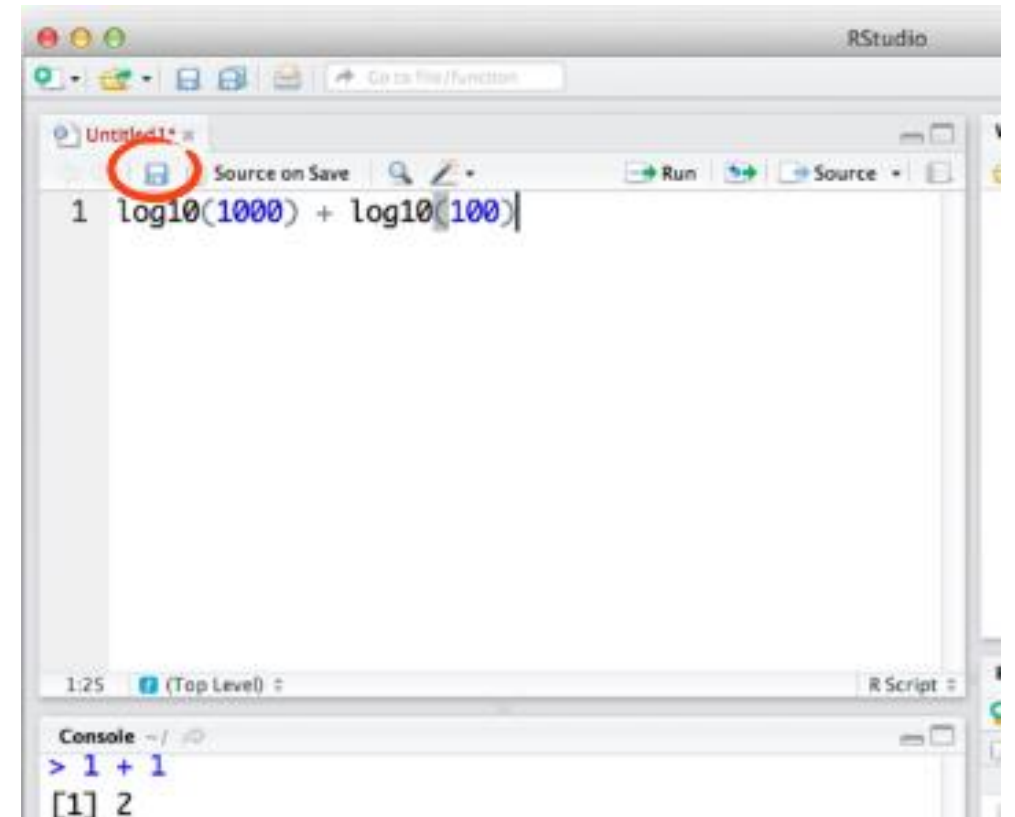

Common workflow

- 1. Write code in an R script
- 2. run code in console with Run

- Save when finish
- Either using icon or in dropdown menu

Creating a new project

1. Open RStudio
2. Go to the `File` menu and select `New Project`.
3. In the `New Project` window, choose `New Directory`. Then, choose `Empty Project`. Name your new directory `Intro-to-R` and then “Create the project as subdirectory of:” the Desktop (or location of your choice).
4. Click on `Create Project`.
5. After your project is completed, if the project does not automatically open in RStudio, then go to the `File` menu, select `Open Project`, and choose `Intro-to-R.Rproj`.
6. When RStudio opens, you will see three panels in the window.
7. Go to the `File` menu and select `New File`, and select `R Script`. The RStudio interface should now look like the screenshot below.

The working directory

- Where R currently thinks 'home' is, all file paths are relative to this

```
getwd()
```

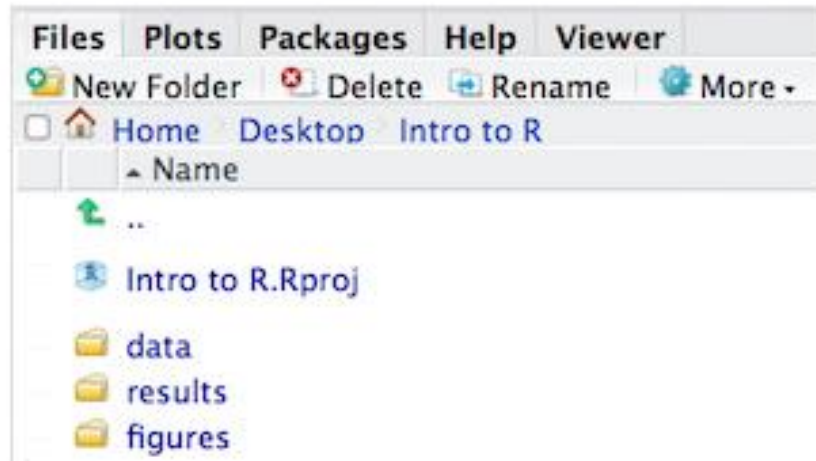

- Visualise your working directory from the *Files* tab
- If you want to choose different working directory you can navigate there using the *More* dropdown menu
- See the File Pane

Workspace

- `ls()`
- See the Environment Pane

Structuring your working directory

- You should separate data into original and intermediate
- Eg you may want to create data/ directory to store raw data
- And results/ directory to store analyses
- Figure/ directory could be used for the plots you generate

Shortcuts

- Up arrow
- Tab
- Ctrl + up arrow
- Ctrl + enter
- And many, many more...
